

RECOVERED OIL / WASTE MANAGEMENT PLAN HOUMA INCIDENT COMMAND

VERSION 2

INCIDENT NAME: MC 252

TYPE & AMOUNT: CRUDE OIL >77,000 BBLS (as of 5/8/10 on ICS 209)

SPILL - LOCATION: MC 252 Incident

SPILL - DATE/TIME: 22 April 2010 2215

Section I. Incident Background

This plan is written at the request of the Incident Commander, the U.S. Coast Guard (USCG) FOSC and the State of Louisiana SOSC. This plan will cover over-arching oil recovery and waste management issues relating to the incident which includes the following activities; oil skimmed off of the water, oil collected from absorbents, decontamination, shoreline impact cleanup and wildlife rehabilitation. The Houma incident command center will be the area covered under this plan. This plan is to cover to oil spill clean-up activities associated with the Deepwater Horizon rig incident where the source point originated in Mississippi Canyon Block 252 of the Gulf of Mexico.

The Responsible Party will abide by all applicable state, local and federal laws and regulations while implementing this plan.

SECTION II. WASTE IDENTIFICATION / CHARACTERIZATION

The following identified categories of material are covered in this plan. Volumes of these types of each collected materials will be difficult to determine and are updating daily due to circumstances associated with the oil spill containment operation and is updated daily on the ICS 209 form.

1. Crude oil skimmed/collected from the water and spill source (Reclaimable/Recyclable oil, E&P Waste)
2. Shore line material collected that is contaminated with crude oil, once drained of practically recoverable oil (E&P Waste/Industrial Waste)
3. Decontaminated fluids from cleaning response vessels, reusable boom, and other such containers contaminated with crude oil (Reclaimable/Recyclable oil, E&P Waste)
4. Non Oil Contaminated general waste such as trash collected from response vessels responding to crude spill event, and material associated with Shore line operation (Municipal Waste)
5. Medical waste associated with wildlife rehabilitation or staging areas (Medical Waste)
6. Dead or Injured Wildlife (United States Wildlife and Fisheries/ and Louisiana Department of Wildlife and Fisheries to coordinate)

SECTION III. WASTE MANAGEMENT APPROACH

Given the complexity of the anticipated landfall of this material and various staging areas the plan is designed to allow for the crude oil contaminated material to be disposed of at E&P exempt facilities under the authority of the Louisiana DNR, and Industrial waste facilities regulated under the authority of the Louisiana DEQ. Each staging area will have predetermined approved locations to take this material. The approved locations, profiling requirements including sampling requirements are included in Appendix A (Houma IC Approved Facilities).

An overall strategy will be employed to reclaim or recycle as much oil as practical prior to having the spill material for disposal.

Heritage Environmental is the selected contractor charged with the proper handling of these recovered material prior to reclaim/recycle or disposal. Heritage has been tasked with the following activities:

- ◆ Sourcing waste containers and transportation at the decontamination/staging areas
- ◆ Segregating, labeling and correctly storing wastes
- ◆ Sampling waste containers in order to characterize wastes, as needed
- ◆ Completing profiles at approved disposal sites (BP or waste contractor approved see appendix A)
- ◆ Completing Waste Manifests for waste sent offsite for disposal
- ◆ Tracking of wastes volumes collected and transported.

SECTION IV. OIL RECOVERING / WASTE HANDLING

The following actions are anticipated to occur in handling this oily recovered material.

1. Segregate oil reclaim/recycle material and waste streams, as much as practical, into the waste/ recovery types listed in Appendix A
2. Individual Staging Area Heritage waste coordinator will label containers appropriately with "BP", MC 252 Event, waste type and start date of accumulation.
3. Waste containers and transportation from the staging area will be provided by Heritage Environmental Services.
4. Upon arrival of waste to the dock or shoreline operations will contact the closest Individual Staging Area HES waste coordinator to request container or location of waste collection area. See Appendix A, and Section V. for details of locations.
5. Industrial wastes/ E&P wastes for disposal in landfill will be profiled and signed by BP Waste coordinator from the Houma IC with the appropriate receiving disposal/recycling facility prior to shipment offsite.
6. All wastes requiring manifesting will be manifested appropriately according to State and Federal requirements and tracked on a spreadsheet Heritage provides to keep the ICS 209 form up to date.
7. Heritage individual staging area waste coordinator will track all manifests on behalf of BP

Each staging area will be equipped with a sufficient supply of DOT-approved containers and with sufficient back-up DOT-approved containers. Each container will be clearly labeled with the appropriate waste stream. Once waste begins to be accumulated within a container, the container shall be labeled with the accumulation start date. The label indicating what is within the container shall remain in place and legible. Once accumulation begins within a container the Heritage Environmental Services representative shall arrange to have the backup container in place. At no time shall we have less than two days worth of containers on site for each waste stream.

Each staging area will be manned with at least one each of the following people during operating periods:

- Security Personnel
- BP Personnel (or the equivalent)
- Heritage Environmental Services Personnel

Upon receiving the waste at the waste segregation area, BP and Heritage personnel will place or supervise the placement of the waste into the appropriate containers. Once a container is considered full, the Heritage personnel shall ensure that the container is properly covered and labeled for transportation. Transportation shall be arranged by the Heritage individual staging area waste coordinator. If the waste is transported under a manifest rather than a Bill of Lading, the manifest shall be signed by BP personnel or their Heritage Environmental designees.

Only known BP clean-up contractors shall be allowed to bring waste to the staging areas. If others attempt to deposit non-spill related waste at the staging areas they shall be immediately turned away by security personnel.

SECTION V. WASTE MANAGEMENT LOCATIONS / STAGING AREAS

The following staging areas are currently identified and may change frequently upon clean-up conditions in the locales needed the most.

Fourchon, Louisiana (site for final vessel decon)
Venice, Louisiana

Hopedale, Louisiana
Slidell, Louisiana
Grand Isle, Louisiana
Cocodrie, Louisiana

The currently approved Oil Recovery/ Recycling and disposal locations are identified in the attached Appendix A.

SECTION VI. TRANSPORTATION

Approved transporters will be used from the staging areas identified in section V. to the approved destination facilities identified in Appendix A. All transporters of recovered oil and solid waste generated as a result of the oil spill will be registered transporters with the LDEQ.

SECTION VII. FINAL DISPOSITION OR DISPOSAL

The ICS 209 form will be used to track the disposition of wastes and recovered product as it relates to this incident. Manifest tracking will be used at each staging area and rolled up to one combined at the Houma Incident Command Environmental Unit by the Waste handling contractor.

SECTION VIII. HEALTH AND SAFETY CONSIDERATIONS

Health and Safety considerations will be covered under the Site Safety Plan at each of the staging areas. Along with the site safety plans, a detailed decontamination plan addresses the concerns of decontamination and the transfer of this material to a recovered product or waste that is addressed in this plan.

Only known BP clean-up contractors shall be allowed to bring waste to the staging areas. If others attempt to deposit non-spill related waste at the staging areas they shall be immediately turned away by security personnel.

SECTION IX. QUALITY ASSURANCE

Oversight of staging area operations will be performed out of the Houma Incident Command Environmental Unit. Daily call in will occur at each site for collection of waste/recovery volumes, general flow of material, and any other issues that may arise from the operations of managing these areas as it relates to waste.

SECTION X. COMMUNITY RELATIONS

Community relations are vital to the handling of this unfortunate situation. With this in mind, a Community Outreach plan has been developed and is being utilized throughout this operation including at the staging areas that address community relations. This plan was also used in the planning and securing of these locations.
